

# YEAR FOUR

## This week...

The children have been learning about the art of Andrew Goldsworthy, an English artist who is known for his use of natural materials in his artwork and sculptures.

Take a look at Malorie's art on our school website.

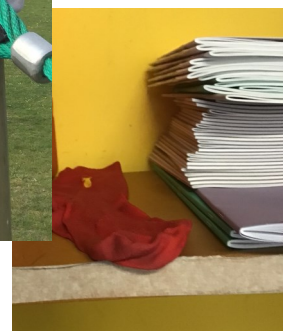

## Last week...

We conducted science investigations to see how temperature effects the rate of evaporation by placing wet socks in different locations around school... including the freezer and boiler room!

We have also learnt how to create and present a slide-share about the sustainability of water.

The children have been asking the question 'How can we save water at home?'

## Next week...

Is Horstead week!!

For those of us who are going, it will be very exciting and we know that the children will have a wonderful time doing all their activities.

**Please do make sure that everything is named!**

For those children who are not going, be assured that there are some super activities planned for them.

We would really appreciate if for the next 6 weeks you could ensure that your child is completing their TTRockstar homework. We have the National Times Table Test (MTC) at the end of June that every child has to complete. More importantly however is that knowing your tables is one of the most important maths skills for adult life.
